

Did you know...

Sierra Foothill Research and Extension Center (SFREC)

- Grazing is a major tool to manage vegetation on rangelands and enhance rangeland ecosystems.
- The Sierra Foothill REC has over 5700 acres of rangeland available for research.
- Partnerships among scientists, managers and policy makers can provide the best knowledge to guide conservation science and planning.

To learn more about range management and other activities at the Sierra Foothills Research and Extension Center, please visit the Center's website.
